SUMMARY

AI/ML Developer with hands-on experience in Generative AI, Retrieval-Augmented Generation (RAG), and Agentic systems. Skilled in Python, TensorFlow, PyTorch, Scikit-learn, LangChain, and FastAPI, with experience building AI applications and end-to-end ML solutions.

EDUCATION

Bachelor of Engineering 2022-2026

Dr. AMBEDKAR INSTITUTE OF TECHNOLOGY, Karnataka **CGPA: 8.34**

Class 12 2020-2022

Alvas PU College, Karnataka **Percentage: 91.3%**

Class 10 2020

Sri Ramakunjeshwara English Medium High School, Karnataka **Percentage: 95.2%**

TECHNICAL SKILLS

Languages: C, C++, Python, JavaScript, SQL

AI & Machine Learning: GenAI, RAG Architectures, Agentic AI, Model Context Protocol (MCP), NLP, Deep Learning (CNNs, Transformers)

Frameworks & Libraries: TensorFlow, PyTorch, NumPy, Pandas, Scikit-learn, Seaborn, LangChain. LangGraph.

Databases & Cloud: PostgreSQL, Vector Databases (Chroma, FAISS), AWS (EC2, S3), Docker

Developer Tools & Web: Excel, Power BI, Tableau, Postman, React, Git, GitHub, FastAPI, Flask, MonogoDB.

Soft Skills: Communication, Teamwork, Problem-solving, Time Management, Leadership.

EXPERIENCE

AI Engineer | NEEROMA TECHNOLOGIES Pvt. Ltd. March 2026 – Present | Remote

- Built and contributed to 'Yantra', an AI-powered Software Orchestrator that automates software workflows from 'idea to production' with minimal human intervention.
- Contributed to the testing, analysis, and enhancement of LLM Studio, an end-to-end AI platform covering Model Hub, Data Factory, Training, Model Registry, Infrastructure, Deployments, Monitoring, and Cost Management.
- Executed automated testing and performance benchmarking across LLM Studio's AI workflows, identifying platform issues and validating fixes to improve model reliability, workflow performance, and deployment readiness.

Applied Data Scientist Intern | UNLOX ACADEMY Jan 2026 – March 2026 | Hybrid

- Developed end-to-end Machine Learning and Data Science solutions using Python, Pandas, NumPy, Scikit-learn, and TensorFlow, covering data preparation, analysis, modeling, and evaluation.
- Performed data cleaning, EDA, feature engineering, and predictive modeling on real-world datasets to identify patterns and generate actionable insights.
- Developed and optimized classification and regression models using Python, Scikit-learn, and TensorFlow through feature engineering, hyperparameter tuning, and model selection, while delivering Power BI and Streamlit dashboards to support data-driven decision-making.

PROJECTS EXPERIENCE

NexaAI Bot July 2026

- Developed an AI-powered conversational application using React and MongoDB to generate intelligent, context-aware responses.
- Integrated LLMs and Retrieval-Augmented Generation (RAG) to retrieve relevant context and enhance response generation.
- Implemented backend workflows for AI inference, context management, data processing, and real-time conversational interactions.
- Optimized client-server communication and backend inference workflows to support reliable and scalable AI application performance.

Tech: React, MongoDB, Gemini API, RAG

Research Assistant using RAG December 2025

- Designed a RAG-based document question-answering pipeline using Python, LLaMA-3.1-8B, LangChain, and ChromaDB/Pinecone vector databases with recursive chunking.
- Implemented document processing, chunking, embedding, and similarity-search workflows with vector database integration for efficient contextual retrieval.
- Reduced hallucination rates from 60% to 15% (45% absolute reduction) by optimizing context window density and retrieval thresholding.
- Exposed the RAG pipeline through API endpoints for seamless integration with frontend applications and external systems.

Tech: Python, FastAPI, LangChain, LLaMA-3.1, ChromaDB, Groq API, Transformers

Flight Price Prediction System *June 2025*

- Built an end-to-end 'flight price prediction system' using historical flight data, applying data preprocessing, exploratory analysis, feature engineering, and machine learning model development.
- Developed and evaluated regression-based predictive models, optimizing model performance through feature selection, parameter tuning, and validation.
- Performed data preprocessing, exploratory data analysis (EDA), feature engineering, and model training to identify key factors influencing ticket prices.
- Implemented the trained prediction model with server-side inference logic and API-ready workflows for real-time flight price prediction and application integration.

Tech: Python, Flask, React, EDA, ML (Regression Models)

ADDITIONAL INFORMATION

Languages: English, Hindi, Kannada, Telugu **Hobbies:** Artworks, Drawing

Initiative: Co-founded the Agriculture Club at Dr. AIT to promote AI-driven solutions in farming.
