EDUCATION

Dr. AMBEDKAR INSTITUTE OF TECHNOLOGY

2022-2026

Bachelor of Engineering, Karnataka

CGPA: 8.34

TECHNICAL SKILLS

Languages: C, C++, Python, SQL

Frameworks: TensorFlow, Keras, PyTorch, Scikit-learn, Transformers, LangChain, Flutter.

AI/ML: Machine Learning, Deep Learning, NLP, RAG, LLM Applications, GenAI, Fine-tuning (LoRA).

Other Tools: Excel, Power BI, Tableau, Postman, VS Code, Git, GitHub, FastAPI, Streamlit.

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Hugging Face Transformers.

Soft Skills: Communication, Teamwork, Problem-solving, Time Management, Leadership.

EXPERIENCE

NEEROMA TECHNOLOGIES - AI Engineer

March 2026 - Present

- Contributed to the testing, analysis, enhancement of LLM Studio, an end-to-end platform for AI model development and deployment.
- Performed functional testing across Model Hub, Data Factory, Training, Registry, Infrastructure, Deployments, Monitoring, and Cost Management modules.
- Identified, documented, and reported platform bugs, usability issues, and workflow improvements while collaborating closely with the development team.
- Researched LLM architectures, NVIDIA AI ecosystem, GPU infrastructure, and model optimization techniques to support platform enhancement initiatives.

UNLOX ACADEMY – Applied Data Scientist Intern

Jan 2026 – March 2026

- Built end-to-end machine learning and data science solutions using Python, Pandas, NumPy, Scikit-learn, and TensorFlow.
- Performed data cleaning, exploratory data analysis (EDA), feature engineering, and predictive modeling on real-world datasets.
- Developed and evaluated classification and regression models, improving model accuracy through hyperparameter tuning and feature selection.
- Created interactive dashboards and visualizations using Power BI and Streamlit to communicate insights and support data-driven decision-making.

PROJECTS EXPERIENCE

AI-Powered Mental Wellness App

April 2025

- Designed and implemented backend REST APIs using Python (FastAPI) to power AI-driven conversations and mood tracking.
- Integrated backend services with the frontend flutter-based interface to enable real-time, low-latency user interactions.
- Managed and optimized client-server data flow to ensure reliable and secure API communication.
- Enhanced backend performance to support scalable, real-time inference workloads.

Research Assistant using RAG

December 2025

- Developed a Retrieval-Augmented Generation (RAG) system to enable intelligent document querying and response generation.
- Implemented backend pipelines in Python to retrieve relevant context and generate accurate, grounded answers.
- Integrated vector databases to perform efficient similarity search and document retrieval.
- Exposed core functionality through API endpoints to support frontend or external system integration.
- Strengthened server-side processing and database interaction through end-to-end backend workflows.

Flight Price Prediction System

June 2025

- Built a machine learning-based system to predict flight ticket prices using historical data.
- Performed data preprocessing, feature engineering, and model training in Python.
- Validated and optimized model performance to improve prediction accuracy.
- Optimized and Implemented server-side prediction logic suitable for API deployment.

ADDITIONAL INFORMATION

Languages: English, Hindi, Kannada, Telugu

Hobbies: Artworks, Drawing

Initiative: Co-founded the Agriculture Club at Dr. AIT to promote AI-driven solutions in farming.
